

Shower Screen Measurement Sheet

Measure **after tiling is finished**, at three heights in each direction, and always use the **smallest** figure — the screen has to pass through the narrowest point.

1 Width — wall to wall

WHERE	MEASUREMENT
At the hob or floor	_____ mm
At about 1000mm high	_____ mm
Near the top of the screen	_____ mm
Smallest of the three →	_____ mm

2 Depth (return) — wall out into the room

WHERE	MEASUREMENT
At the hob or floor	_____ mm
At about 1000mm high	_____ mm
Near the top of the screen	_____ mm
Smallest of the three →	_____ mm

3 Height

Hob or floor to where the screen finishes: _____ mm (standard is around 1950–2000mm) · Bulkhead or shelf that intrudes? _____

4 Plumb and level check

Hold a long spirit level against each wall the screen meets and note how far the wall is out over the screen height.

CHECK	RESULT
Left wall out of plumb by	_____ mm over the screen height
Right wall out of plumb by	_____ mm over the screen height
Hob level along its length?	Yes ☐ No ☐ — if no, by _____ mm

More than 10mm out of plumb?

Tell us before ordering. Semi-frameless screens adjust 10–20mm within a wall channel; frameless screens have very little adjustment and demand near-plumb walls.

5 Configuration

Waste position: _____ · Door opens: Left ☐ Right ☐ Sliding ☐ Fixed panel ☐

Before you send it

Measured on tiled surfaces ☐ Smallest figures marked ☐ Plumb checked ☐ Photos of the space taken ☐
Custom and cut-to-size screens cannot be returned for a wrong measurement — we would much rather check your numbers first.
